

# Construction

## About the Program

Students are introduced to the concepts and practices that underlie careers in construction technology and construction management. The students will gain skills and abilities to utilize technology and tools throughout the program to learn and understand construction principles and continuously build on skills in safety, tool knowledge, math, materials, building codes and practices in residential construction. Project based learning allows students to use tools and materials to fabricate the varied stages of construction.

## Course Sequence

- Principles of Construction
- Construction Technology I
- Construction Technology II

## Career Opportunities

- Architecture
- Building & Construction Management
- Carpentry
- Construction Trades
- Engineering
- Manufacturing Trades

## Student Organizations

- National Technical Honor Society (NTHS)
- Technology Student Association (TSA)
