Architectural Design

About the Program

Students will gain knowledge and skills in the application, design, production, and assessment of productions, services, and systems. Students gain an understanding of career opportunities available in the Architectural field and learn what employers require in order to gain and maintain employment in Architecture and related fields. Students work in computer labs equipped with similar technology found in the workplace. Students complete individual projects as well as participate in team projects based on requirement from real-world situations. The activities focus on the development of working drawings, presentation drawings, and model building.
